

PULSE

Incredible performance. Astonishingly small.

The Shoutmedia **PULSE** series is perfectly designed for the studio environment. Fully powered, but very small (11.8" x 7.9" x 7.3"), the Pulse is perfect for the small studio running a Pro Tools / Digi 002 system (or similar studio solution), and robust enough to handle the largest studio applications.

RELIABLE

Shoutmedia computers are constructed with brand-name components, and only those that have been tested and verified to work reliably with professional audio software and hardware components. Additionally, the operating system and hardware sub-systems in Shoutmedia computers have been significantly modified to provide optimal performance. All this results in a computer that works reliably and predictably in professional media applications.

QUIET

Shoutmedia cases are custom modified with low-noise fans, and vibration resistant mounting of components. The cases are internally damped with sound and vibration absorbing materials creating one of the quietest computers available.

COMPLETE

Shoutmedia computers are configured with professional audio software and hardware preinstalled, creating a computer that works "out-of-the-box" in a professional audio environment. Shoutmedia supports all major pro audio hardware / software solutions.
